### Situation

Daylight Savings Time (DST) will begin three weeks earlier this year, on March 11, 2007 and will end one week later on November 4, 2007. Since this change was only recently introduced, Series IV, VIII and XI software versions prior to 5.6.27, 6.2.27 and 9.1.27 do not support the changes to DST.

Without correcting this issue, Exacta POS clocks will not display the correct time, which will affect reporting and day end during these two periods:

- Between March 11, and April 1, 2007
- Between October 28, and November 4, 2007

This will continue to be an issue in subsequent years if the software is not updated. Please contact your distributor or Exact One for the availability and pricing of software updates.

For older software versions, it is necessary to change the times manually, and override the automatic handling of DST. PayMasters, Excels, and Maxx Tellers do not support automatic handling of DST and must be set manually. Consult the Excel Operators Guide for information on setting time on those units.

### Setting up

In order to make the changes to the clock and over ride Automatic handling of the DST, you will require at least a Level 2 (Manager's) password. If you do not have one or have forgotten yours, please contact your distributor or Exact One to obtain one.

This procedure will only take a few minutes, but it is important that no one be using the self serve bays or vacuums while doing so, or else their credit card or fleet account may be charged for the additional hour.

### Procedure

At the Exacta POS/Console.

1. Press the **[K] Menu** key on the keyboard. Press **[1] Program Menu**. (If you have an older unit with the key switch on top, turn the key clockwise to enter Program Menu).
2. Type in your password and press **[E] Enter**.
3. If the Menu that appears has the option **[4] System Setup**, press **[4]**. If not, proceed to the next step.
4. Press **[1] Set Clock**. The Date/Time setting screen will appear.
5. Confirm that the date is correct. If it is, press **[E]**. If it is not, correct the date, and then press **[E]**.
6. Set the correct time. Use 00 for seconds. Press **[E]**.

7. Answer the *Time of Day* question as appropriate by pressing the appropriate key— **[1] AM [2] PM** .
8. Answer **[2] No** to the question *Use Daylight Savings Time?*. This overrides the automatic handling of Daylight Savings Time.
9. If required, answer the question *Send changes to Slaves?* as appropriate by pressing the appropriate key.
10. Continue pressing the **[E] Exit** key until the screen is back in run mode.
